EDUCATION

DePaul University

Master of Science in Human-Computer Interaction

(Online)

Expected: June 2028

University of Illinois Chicago (UIC)

Bachelor of Science in Computer Engineering, Minor in Mathematics

May 2026

SKILLS

Programming Languages: C/C++, Python, TypeScript, JavaScript, SQL

Tools & Frameworks: React, React Native, Streamlit, Vite, Tailwind CSS, Git, GitHub, VS Code, Figma

PROJECTS

Medical Anomaly & Model Steering Studio

- Engineered an unsupervised anomaly-detection pipeline using PCA and Isolation Forest across 13 clinical features and 297 patient records; flagged 30 anomalies, 18 (60%) of which corresponded to patients with heart disease.
- Evaluated anomaly predictions against diagnosis labels, finding 119 patients with heart disease classified as normal, exposing limitations of unsupervised detection.
- Addressed this limitation by developing a human-in-the-loop system that lets users relabel misclassified patients and trigger live retraining, with an updated decision tree visualizing revised model reasoning.

OpenCall — SparkHacks (2nd Place Overall)

- Led web development for a 4-person team, rapidly iterating on a React/TypeScript talent-matching platform under a 24-hour deadline to place 2nd out of 31 teams.
- Tested and debugged the web application throughout development, identifying and resolving interaction, navigation, and UI issues while communicating implementation decisions with teammates.
- Built and refined reusable React/TypeScript components across the user flow, improving functionality and usability under a strict hackathon deadline.

Auffline Music Device — Senior Design Project

- Awarded “Best Table at Expo” by the UIC College of Engineering for professionalism, public presentation, and product delivery.
- Engineered a custom C/C++ GUI for an embedded music device, building out navigation, playback, and file-management features across the hardware/software stack.
- Bridged the GUI with the embedded system, debugging hardware-software interactions to deliver reliable, responsive performance for the end user.

EXPERIENCE

Restaurant Manager

Buffalo's Grill (Family-Owned Restaurant)

March 2022 – Present

Sycamore, IL

- Ran daily operations at a small family-owned restaurant, covering multiple roles across order-taking, food prep, closing, and cleaning to keep service running smoothly.
- Served English- and Spanish-speaking customers, communicating fluently in both languages to take orders and resolve issues.
- Handled cash and credit card transactions with daily close-out, ensuring accurate end-of-day reconciliation.
